

# ACTIVTRAK FEATURES

ActivTrak includes a unique and intentional suite of product features. All have been specifically tailored to provide data-backed insight into how your organization gets work done.

WORKS WITH

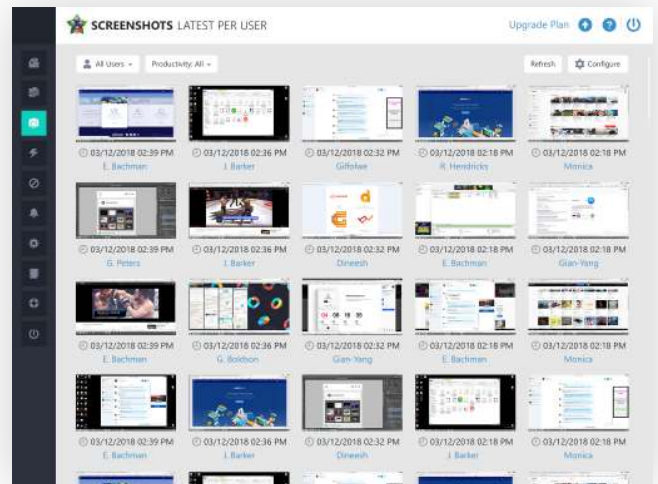

## Intuitive Dashboard

ActivTrak's easy-to-read dashboard is designed to give you a high-level overview of the activity on all of your monitored devices.

## Capture User Screens

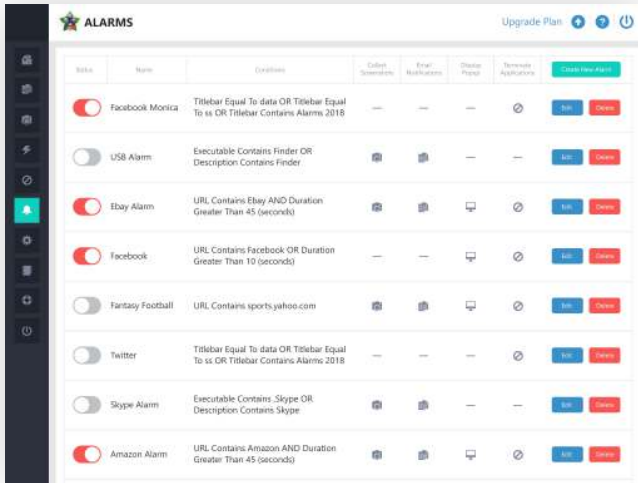

See what's going on from anywhere in the world. Capture screenshots or videos from your remote workstations no matter where they are.

## Real-Time Activity Monitoring

Observe and analyze activities as they are happening. When monitoring data in real time, it's quicker and more convenient for administrators to gain insights into user activity.

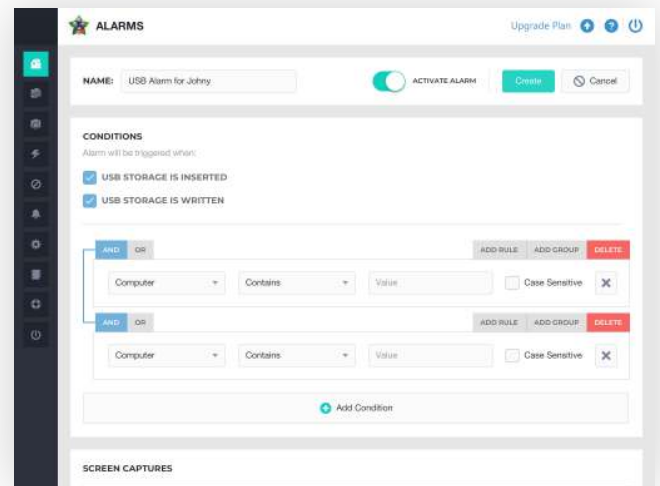

## Activity-Based Alarms

Alarms let you put your policy control on autopilot. They trigger when pre-defined conditions, such as accessing a certain website, are met. React automatically with screenshots, videos, email notifications to the account administrator, popup messages to device users or application termination on the device that triggered the alarm.

## USB Tracking Alerts

ActivTrak's USB detection provides a way for you to set alarms whenever a USB is inserted, written to, or both. This provides companies with protection against insider threats.

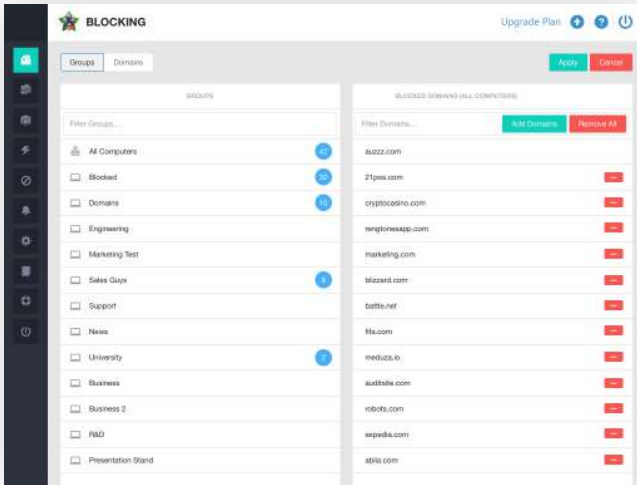

## Identify Risky Users

ActivTrak allows administrators to keep track of users who are a higher risk to unintentionally cause a breach. Using risk scoring, admins can assign a risk level to an alarm using a scale of 1 to 10, which signifies the amount of risk connected to a certain behavior. These scores are then calculated for the user based on how many alarms they've triggered. This can help administrators pinpoint users who may be exhibiting risky behaviors.

## Comprehensive User Activity Reports

ActivTrak will tell you everything that happens on your monitored workstations, be it web, application or system usage, online or off. We document and organize this information into beautiful, useful, easy-to-read reports that highlight key data points. You can even drill down further into the data to better understand individual workflows.

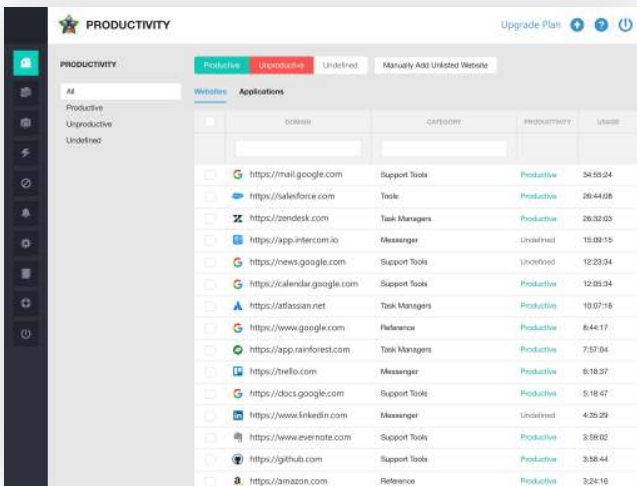

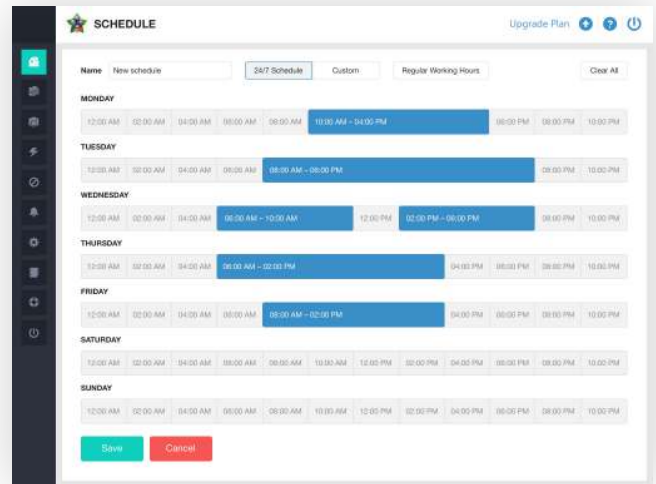

## Malicious Website Blocking

Some websites are notorious for tricking users into installing malware onto their computers, while others are just unsavory. Protect your network and devices by identifying and blocking any website from individual users, groups, or everyone at once. Further protect your devices by enabling termination alarms to restrict application usage to only necessary applications.

## Monitor on a Schedule

Scheduled monitoring lets you tell ActivTrak when it should and shouldn't be monitoring your assigned workstation. Now you can rest assured knowing you're not collecting data outside your scheduled monitoring hours.

## Tailor-Made Settings

ActivTrak gives administrators flexibility when it comes to things such as what is productive or unproductive, employee grouping, employee aliases, and administrative privileges. This gives users the options to tailor their experience to their specific needs.

## Mobile App

The ActivTrak app makes employee monitoring on-the-go seamless. By downloading the native app from the Apple App store or the Google Play Store, you can view the same beautiful interactive usage reports you set from the web-based version on your desktop right in the palm of your hand. You'll be able to access screenshots, a real-time activity feed, a streamlined dashboard, and many of the useful features you access from web-based version.

# ADD-ON FEATURES

## Screenshot Redaction

The screenshot redaction feature provides Administrators with the option to prevent sensitive information from being seen in screenshots. This keeps sensitive information safe from leaving the office.

## On-premises

Host ActivTrak on your own in-house infrastructure. You control the security settings and hardware, we support the product. Ongoing support included.

## Raw Data Access

ActivTrak makes it easy to take the raw data collected and send it to your favorite BI tools. Build custom reports, push behavior data to your existing infrastructure, and perform any query your heart desires — all from a simple query interface.

## Accurate Screenshot Flagging

The flagging service constantly interprets the content of screenshots to accurately label unsafe content into four categories of interest: adult, violence, medically graphic, and racy. Filter for all of the flagged screenshots at the click of a button.
